

Let's Talk About Water: a film and water event

Convened by Let's Talk About Water

**Side Event - Budapest Water Summit 2016
28 November 2016, 15:00-15:30 - Tisza Gallery (Building D)**

With climate change effecting water and people in many ways and the establishment of a Sustainable Development Goal focused on water, it's time for a revolution in communication about water science. From historic films to data visualization, Let's Talk About Water (letstalkaboutwater.org) created by Linda Lilienfeld and CUAHSI (cuahsi.org), hopes to spark dialogue about the importance of visual communications for bringing water science to policy makers and the public. This event will take a special look at Regen (Rain), 1931, a Dutch film by Joris Ivens and will discuss the 2016 United States National Water Map (water.noaa.gov) that connects 2.7 million data points to visualize flood potential in real time. We will also explore the Amsterdam Metropolitan Solutions (ams-institute.org) project, which examines flows in urban settings using Amsterdam as the test bed. See you there or B2!
