

Export products and services of the Hungarian Water Sector

Convened by the Hungarian Water Utility Association (MaVíz)

Side Event - Budapest Water Summit 2016

30 November 2016, 9:00-9:30 – Tisza Gallery (Building D)

The Hungarian Water Utility Association (MaVíz) would like to introduce you briefly the most significant export products and services of the Hungarian Water sector with the aim of helping our partners to find the best materials, equipment and professional knowledge that are necessary for the establishment and operation of water and wastewater utility services. According to the United Nations, there are today 2.5 billion people, who live without basic sanitation and it is estimated that every 20 seconds, a child dies as a result of poor sanitation. We truly believe that our members can contribute with their innovative solutions to the realization of the water-related UN Sustainable Development Goals.

The Hungarian Water Utility Association was established in 1990 with the aim to act as an independent representative of the water sector's interests, intermediating trade development and engineering services. In Hungary, 41 public utilities operate under different structures and 38 of them are affiliated members of MaVíz, which represents more than 98% of the country's public water supply system. In addition to this, more than 100 members represent the water industry and trade, institutes and engineering services.

We would like to present you those companies, which have developed high quality export products and services and would be ready to share with you the experience and skills, which have been accumulated during the past decades. You can discover not only the different export products and services of the water sector's producers and suppliers but also the world famous knowledge and best practices of the Hungarian water utility companies.

We would also like to make you familiar with our educational programme and training courses that are offered to our international partners in several water related topics. The MaVíz International Training Programme was launched in 2016 and it is exclusively designed for those foreign students and employees of the water sector, who wish to acquire new practical skills, knowledge, experience and best practices from the experts of the Hungarian water utility sector.
