

Resource Efficiency and Best Available Environmental Practices in Industry

Convened by the United Nations Industrial Development Organization

**Side Event - Budapest Water Summit 2016
28 November 2016, 13:00-14:00 – Duna Room (Building D)**

The event will focus on promotion of resource efficiency and best available environmental practices in industries of the Eastern Europe and Caucasus region through the Transfer of Environmentally Sound Technologies (TEST) and Resource Efficiency & Cleaner Production (RECP) Programmes. The objective of the side event is to present UNIDO's work in assisting developing countries and countries with economies in transition with the transfer of best available environmentally sound technologies and environmental practices to improve water productivity in industry and to protect water resources.

Speakers will reflect on projects and activities of UNIDO in the area of water use in industry from past national and regional projects to current activities and future perspective issues in particular relevant to the Eastern European countries and Newly Independent States.
